GREENING THE GREAT INDOORS
Having plants in our schools is an important component of creating a sustainable classroom ecology and healthy minds and bodies. Indoor plants remove air pollutants and stabilize CO₂, while creating a happier and calmer space for creative and focused learning.

SMARTY PLANTS
Classrooms with plants improve test scores by 10% or more.

HEALTHIER STUDENTS
Plants in the classroom result in fewer sick days.
In fact, Dutch children in classrooms with plants showed a 7% reduction in health problems. Along with better health, they were also more creative and had 20% higher test scores.

A CALMING INFLUENCE
The greener a child’s play area, the less severe the symptoms of ADD. Everyone is just calmer and more relaxed when plants are around.

HAPPY CLASSROOMS
Students and teachers report more positive feelings and satisfaction with plants in classrooms.
Students misbehave less in a classroom containing live plants.
